

IN THE ABSTRACT

Please amend the Abstract as follows:

-- ABSTRACT OF THE DISCLOSURE

The A pocket telephone having a display screen on which a plurality of icons of a main menu are shown. The user can select one of the icons to cause the telephone to implement a corresponding function by positioning a focus is positioned on one of the icons shown on a the main menu screen. _ and the The focal selected icon is shown enlarged, while the remaining icons are visible.

~~On the main menu screen 40, as shown in FIG. 6 (b), a plurality of icons 41 corresponding to items or groups of items from which to choose are shown. The focus (selector) is positioned on one of the icons (the focal icon is surrounded by a frame like cursor 42) and the focal icon is shown enlarged. By working the joy stick (not shown), the user can shift the focus to any icon. The remaining icons 41 other than the focus icon 41 shift to be more closely spaced, thus widening the area where the focal icon is shown. No matter what icon 41 is chosen as the focal one, the icons 4 shown remain the same. --~~
